

Dear Government of Greenland,

My name is Dion. I am a physicist. I did my undergraduate and graduate work at Stanford University and worked on the Gravity B Probe experiment, a multi B dollar project, designed to verify and support Einstein's theory of relativity. I am also a citizen of Lithuania and a citizen of the EU.

I have reviewed the safety and environmental procedures that Greenland Minerals are in the process of developing for their project at Kvanefjeld, and find no safety issues either short or long term. I am also an environmentalist and a proponent of Green energy as proposed by the current US administration and strongly feel that this project must be approved in order to facilitate The EV revolution now starting. It will be a huge benefit to the movement toward Green Energy and a huge benefit to the people of Greenland, Denmark and the EU.

Thank you for your consideration.

Dion Monstavicus
